

NEAR-DEATH KIDS – CHANGES I NOTICED WITH INTELLECT
(Percentages from Questionnaire Survey)

Mind works different from before.....84%

Significant enhancement of intellect.....68%

Mind tested out or considered on genius level (birth to age 15).....48%
IQ score between 150 to 160

Birth to not quite age 6, tested out on genius level.....81%
IQ score between 150 to 160

Birth to age 15 months (especially if in dark light).....Nearly all
IQ score begins at around 180 and on up

Drawn to and highly proficient in math/science/history.....93%

Professionally employed in math/science/history.....25%

School:

Easier after experience.....34%

Harder after experience.....23%

Rejected school discipline.....30%

Note: School figures are partial as 43% claimed either to have blocked out school memories or just couldn't recall.

After their near-death experience, the children's learning ability in most cases reversed: instead of continuing on with the normal developmental curve, from concrete (details) to abstract (concepts), they returned to life immersed in broad conceptual reasoning styles and had to learn how to go from abstract back to concrete.

THE LEARNING CURVE REVERSED! ! !

(Percentages from Questionnaire Survey similar to notations from observations.)
